

## Information Sheet

**Can playing fun games help improve your behaviour?**

Well, we know it can but we've never run a study where kids train at school.

**We'd like you to be part of our school research study!**

### **What will you do?**

- An assessment involving some fun games, some questions, and we'll even measure your brain activity!
- Twenty training sessions on the Focus Pocus game (see below). It's fun!
- Another assessment involving some fun games, some questions, and brain activity.
- You will get to wear a cool device that can measure your brain activity (see below). In some games, you control it with your brain activity! This device is very safe and comfortable.
- We will ask you questions like "In a normal day I mostly have to do what I am told", or "After you fell asleep, did you wake up during the night?"

### **Focus Pocus game**

During the training, you'll play Focus Pocus which has simple and fun games that are very easy to play. You can see some of the games in the pictures below:

If you have any questions about this research, please ask your parents or Anna (the School Psychologist). If you feel anxious or worried during the study please let your parents or Anna know. As you are volunteering, and you can withdraw at any stage - just let your parents or Anna know.

Thanks from  
*Professor Stuart*
